Assignment Coursework for Software Engineering Course

This assignment covers all aspects of software engineering from lifecycle models, requirements specification, design, coding, testing and maintenance. All the work will be done in groups of three people where each group member will have a specific responsibility for the work of the group. You cannot change the group that you are in during the course.

The assignment will be in two parts as shown in Table 1.

Table 1: Assignment requirements

Title	Type	Form	%	Week
Software Requirements	Continuous Assessment	Report	50 %	5
Specification and Management Plan	Continuous Assessment	Report	50%	10

Part 1 of the assignment worth 50% of the total course mark.

Will require you submit a MS PowerPoint slideshow in pdf format (with no more than 10 slides) no later than midnight on Friday the 2nd of October 2026 on Moodle. Make sure that all your names and ID numbers are clearly printed on filename this submission.

The MS PowerPoint slideshow in pdf format shall provide a statement of software requirements for a software project for which I will be the customer. You will choose one of the following projects:

1. **A group of playing and non-playing characters for a computer gaming system.**
2. **A first person shooter game on mobile platform.**
3. **An E-commerce shop for fashion brand.**
4. **A university virtual learning environment.**
5. **An online mobile recharge is a web-based application.**
6. **An online second-hand book buying & selling portal.**
7. **An online fast food ordering system.**
8. **An advanced intelligent tourist guide.**
9. **A heart disease prediction system.**
10. **A smart health consulting system.**

11. **A smart city traveler system.**
12. **A secure online auction system.**
13. **A customer targeted e-commerce system.**
14. **A secured merchant payment using biometric transaction system.**

You Need To:

- **Working in a group of 3.**
- **Select one of these projects.**
- **Discuss with teacher what is needed in order to help with your software requirements research.**
- **Conduct research through the library and online to establish what software is needed to develop the system.**

The MS PowerPoint slideshow pdf will contain:

- **A statement of what you have found out through research with regard to your chosen software project.**
- **Allocation of tasks i.e. who did what, where why, when how.**
- **A basic model of the chosen project using Microsoft Visio software.**
- **A statement of agreed software needs which has been agreed with teacher acting as the customer.**
- **Make sure that all your names and numbers are clearly printed on this submission.**

Part 2 of the assignment worth 50% of the total course mark.

You will submit a complete project plan in pdf format and a fully detailed requirement specification of your chosen software development project, no later than midnight on Friday the 6th of November 2026 on Moodle. This will be no more than 20 pages in length and make sure that all your names and ID numbers are clearly printed on filename this submission.

This project plan will show all:

- **Task headings.**
- **Tasks.**
- **Subtasks.**
- **Task relationships.**
- **Resources assigned with costs.**
- **Make sure that all your names and numbers are clearly printed on this submission.**
